

*In the
Garden*

*"Strange it is indeed what a difference one
little touch of the artist's brush will make."*

Mettowee Stone in the Garden

How often an otherwise charming landscape just misses the ideal because it lacks that elusive "something." In most cases the use of "*Mettowee Stone*" will add the finishing touch of color that gives it life.

Perhaps its greatest virtue, and certainly one peculiar to "*Mettowee Stone*," is that it blends without violence to any environment—no glaring highlights, no vividly obtrusive colors—only the soft, subdued tones of old tapestries or the mellow hues of an autumn woodland.

The markings are essentially artistic, and produced as only the hand of Nature can produce them.

Your Landscape Architect will tell you that "*Mettowee Stone*" offers infinite possibilities for the creation of harmonious effects in the garden because of its variety of color, texture and design. Pathways and stepping stones or simply a "patch" in some favorite shady nook will produce a finishing touch.

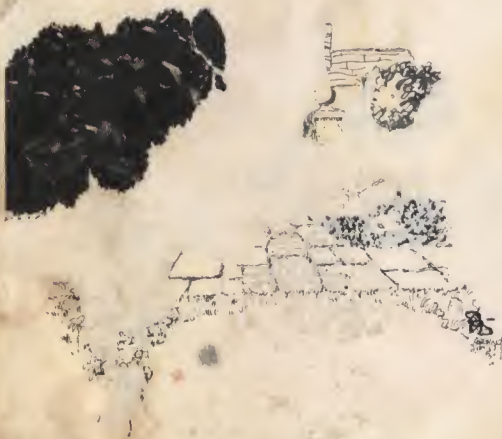

Remember, the garden is part of your home; in the summertime our idle, museful moments find their greatest delight amid restful natural surroundings. Color is Nature's most beautiful creation—what a monotonous, uninteresting world this would be without it.

While "*Mettowee Stone*" is the most effective of all flagging materials, it is not a material which is commercially common. So that the full realization of its color value may be obtained we urge that you give us some idea as to the nature of the surroundings, or a plan of the space to be covered so that our Architectural Service Department may submit you a suggestion wholly in sympathy with the general landscape features. They will also quote a price on the required stone delivered to your nearest railroad station.

The Origin of Mettowee Stone

Mettowee Stone is a distinctive formation of rock, but so exclusive and unique that we especially named it so as it may not be confused with ordinary flagstone.

The quarries from which this rock is produced are located in the hills of Vermont, not very far from the world's famous marble quarries, and incidentally the color designs are somewhat similar. The word "*METTOWEE*" is derived from a river of the same name flowing through these hills.

A Few Striking Examples of Mettowee Stone on Large Areas

TWO views of the magnificent Mettowee Stone Terrace on the estate of Mrs. Horace Dodge, Grosse Point, Detroit.

Chas. Wellford Leavitt, Architect

Undoubtedly, the pleasing variation of color tones is the first thing that impresses one. Imagine the uniformity of the landscape if we walk on plain ordinary flagging.

Two Additional Views looking toward Lake St. Clair

The waters of the lake, visible in the distance, offer a pleasing contrast to the beautiful colors of Mettowee Stone

This combination with plain stone colors of Mettowee Stone is effectively emphasized

Some of the Colors of Mettowee Stone

BEING a product of Nature, no two pieces of Mettowee Stone are exactly alike, but the plates shown herewith can be considered as fairly representative of its richness in color and detail of texture. ∴ Some weather to beautiful shades of Buffs and Rustics; while others are unfading. ∴ Intermixed they produce strikingly beautiful and effective color combinations, in perfect harmony. ∴ Our circular on "Vendorco" Stone (the choicest of Mettowee productions) illustrates additional color effects and will be mailed on request. ∴ Mettowee Stone is produced and sold exclusively by the Vendor Slate Company and is obtainable nowhere else.

In Fact—Mettowee Stone is Essential for Real Garden Beauty

Other Uses of Mettowee Stone

METTOWEE STONE is specified by the leading architects and extensively used on many noteworthy residences, churches and other public institutions; it is the only material embodying all the characteristics of a real roof; true architectural value, strength and life time durability. The fact that slate has been foremost ever since the 14th century gives us absolute right to claim it is the most desirable roofing material obtainable.

The value of *Mettowee Stone* for interior flooring, terrace and porch work is being widely recognized. In churches, conservatories, club rooms, vestibules, etc., the fascination of informal treatment cannot be better manifested.
